RE: SOVEREIGN INTERNATIONAL

To Whom it May Concern:

Parsons Brinckerhoff has been working with Sovereign International on a number of projects involving their NOH2O injectable waterproofing grout. We are currently designing, overseeing and implementing a program using NOH2O to isolate two of the New York City Transit System's older tunnels under the East River from further future contact with salt water.

We have designed, with input from Sovereign International, a replacement bolt for use in the cast iron sections of these tunnels that are leaking that can be injected with NOH2O after it is installed. This new bolt system allows for the elimination of some difficult inflow situations

We have also designated the NOH2O product as a sole source waterproofing material on some Metro North Rail Road bridge renovation projects we have designed. The first of these contracts has been awarded and we are waiting for acceptable weather conditions for the grouting efforts to begin.

Please call me at 212-465-5443 if you require additional information or would like to discuss this matter.

Very truly yours,

PARSONS BRINCKERHOFF
